S. BASU  
Director General of Observatories

## MINISTRY OF TRANSPORT AND COMMUNICATIONS

### Meteorological Department

*Memorandum regarding the probable amount of monsoon rainfall in 1959*

Previous weather conditions over certain parts of the world enable us to form an estimate, within somewhat wide limits, of the monsoon rainfall of India during the period June to September. These predictions aim to pass a statistical test of 80 per cent success, in other words aim at being correct four times out of five on the average over a long series of years.

The data used are given in section 2 below; these are followed by notes on the relevant inferences that may be drawn from them.

#### 2. Data

**Java**—The monthly rainfall departures from October 1958 to February 1959 were +14 per cent, 0 per cent, +56 per cent, +3 per cent and +19 per cent respectively.

**Equatorial pressure**—Pressure was in defect by .85 mb. at Port Darwin in March to May and by .07 mb. at Seychelles in February and March; and was in excess by .24 mb. at Djakarta from January to April.

**South Rhodesia**—Rainfall from October 1958 to April 1959 was in defect by 43.2 mm.

**South America**—Pressure departures were as follows:—

|            | Buenos Aires | Cordoba   | Santiago (Chile) |
|------------|--------------|-----------|------------------|
| April 1959 | ..           | -2.67 mb. | -2.53 mb.        |
| May 1959   | ..           | +1.07 mb. | -0.13 mb.        |

**Upper winds in m.p.s.**—Bangalore, April, 6 Km.—The northerly component was -2.1. Calcutta, May—The easterly component was -7.7 at 4 Km. and -5.2 at 2 Km.

Gwalior, March, 2 Km.—The easterly component was -8.5.

#### 3. Inferences from the information

For the Peninsula—taken to consist of Bombay State, Madhya Pradesh (excluding Madhya Bharat, Bhopal and Vindhya Pradesh areas), Mysore North, Coastal Mysore (excluding South Kanara), Telangana and Coastal Andhra Pradesh—the available factors found to be of most importance are, in the order of decreasing reliability, Bangalore upper winds, Java rain, South American pressure, Calcutta upper winds at 4 Km., and South Rhodesia rain. Of the factors, Java rain and Bangalore upper winds are very unfavourable, South American pressure slightly unfavourable, South Rhodesia rain indifferent and Calcutta upper winds are very favourable. The statistical analysis indicates that there is a four to one chance that the monsoon rainfall in the Peninsula during June to September 1959 will lie below 97 per cent of the normal.

For Northwest India—taken to consist of Jammu and Kashmir, the West Uttar Pradesh, the Punjab (I) (including Himachal Pradesh and Delhi) and Rajasthan—the factors used are, in the order of decreasing reliability, Equatorial pressure, Gwalior upper winds, Calcutta upper winds at 2 Km., South American pressure and South Rhodesia rain. Of these Gwalior upper winds are very unfavourable, South American pressure indifferent, South Rhodesia rain slightly favourable, Equatorial pressure moderately favourable and Calcutta upper winds very favourable. The statistical analysis indicates that there is a four to one chance that the monsoon rainfall in Northwest India during June to September 1959 will lie above 96 per cent of the normal.

#### 4. Summary of Forecast

The monsoon rainfall during June to September 1959 is likely to be normal or slightly below normal in the Peninsula and about normal in Northwest India.
